

Boron Trifluoride Mock Incident Training

Honeywell

An important aspect of Honeywell's commitment to safe and reliable transportation of Boron Trifluoride (BF_3) is emergency preparedness. We offer BF_3 training that includes mock incidents so customers and local emergency responders receive hands-on practice addressing realistic scenarios.

BF₃ Emergency Preparedness Through Realistic Training

Mock Incident Training

Provided by Honeywell's training specialists, a "mock incident" simulates a BF₃ emergency using our training MEGC. The training MEGC is an exact replica of what is used to transport BF₃. The MEGC can be located anywhere that is most convenient for the training, whether it is a parking lot or a safe area of the process unit.

A decontamination staging area is set up as part of the training.

Some benefits of our hands-on Mock Incident Training include:

- A realistic simulation that is tailored to meet your needs
- Responders practice BF₃ emergency response safely and efficiently
- In collaboration with you, Honeywell experts oversee the mock incident
- Valuable feedback is provided post-event

Hands-On Practice Improves Responder Readiness

When it comes to gaining the confidence and expertise to effectively handle a BF₃ emergency, hands-on practice in realistic conditions is essential. Honeywell's Mock Incident Training provides a unique experience that is unmatched in the industry.

- BF₃ training equipment is the same as what responders would see at a real incident
- Participants become familiar with protective equipment worn during a BF₃ emergency
- Honeywell experts closely monitor the training to prevent potentially unsafe conditions
